Modulating angiogenesis is useful for treating or preventing hypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, tissue ischaemia in the lower extremities, infarction, trauma, vascular occlusion, prenatal or postnatal oxygen deprivation, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chicking, proliferative angiopathy e.g. diabetic microangiopathy with necvascularisation. Suppressing an immune response is useful for with necvascularisation. Suppressing an immune response is useful for with necvascularisation attoimmune disease such as systemic lupus crythematosus, multiple sclerosis, insulin dependent diabetes mellitus, commercive tissue disease, primary biliary cirrhosis, pernicious anaemia, autoimmune thyroiditis, idiopathic Addison's disease, vitiligo, dispathic and such angential arribitis, dispathic Addison's disease, vitiligo, dispathic disease, rheumatoid arribitis, discoid lupus, ulcerative colitis and chease the method is useful in preventing or treating corrections corrections of preceding appoint provint and organic prolitis and corrections.
                                                                                                                                                                                                                                                                                                                                         Modulating anglogenesis and an immune response in an individual, for treating a hypoxic or ischemic condition, comprises administering a compound that modulates the activity of a signal transducer and activator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human protein related to angiogenesis regulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 83-85; 94pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a predominant allelic variant of human Signal Transducer and Activator of Transcription 3 (STAT3) protein, an intracellular transcription factor which mediates IL-6 signals. The encoding sequence differs from the original published human STAT3 gene sequence (Akira et al., 1994). Host cells comprising a recombinant STAT3 protein er an be used for the recombinant expression of the variant. STAT3 protein is useful as a medicament or pharmaceutical composition for treatment of autoimmune or inflammatory diseases
                                                                                                                                                               Signal Transducer and Activator of Transcription 3; STAT3; allele; IL-6; intracellular transcription factor; interleukin-6; medicament; variant; pharmaceutical; autoimmune disease; inflammatory; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 NHPTAAVVTEKQQMLEQHAQDVRKRVQDLEQKMKVVENLQDDFDFNYKTLKSQGDMQDLN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a mouse acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (IL-6). The protein is encoded by a cDNA, isolated from a mouse liver cDNA library using a polymerase chain reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide) as a probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer, osteoclasia, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACIGGPPNICLDRLENWITSLAESQLQTRQQIKKLEELQQKVSYKGDPIVQHRPMLEERI 309

                                                                              8
                                                                                                      셤
                                                                                                                                                                                                        The present invention relates to a crystal of an N-terminal fragment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of greater than S.O Angstroms. The present sequence is the N-terminal domain of the murine STAT 3 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to methods for detecting compounds that bind to signal transducer and activator of transcription (STAT) proteins for the discovery and development of new drug compounds based on the structural properties of the protein crystal. The methods include: identifying a compound that binds to the N-terminal domain of a STAT protein, identifying a compound that enhances or diminishes the binding of the dimeric STAT proteins to each other and/or their nucleic acid binding site; or identifying a compound that enhances or diminishes the ability of STAT protein dimers to induce the expression of a gene operably under the control of a promoter containing at least two adjacent weak binding sites for STAT protein dimers. The methods are used for identifying new cluds. An antagonist of STAT N-terminal dimeric interactions that inhibits the binding of the STAT dimers to adjacent weak binding sites on a promoter of a gene, could be useful as drugs in the treatment of diseases, e.g. inflammation, allery, asthma and leukaemias. On the other hand, an agonist of N-terminal dimeric interactions between STAT dimers,
      and activator of
new drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           can be used as drugs in the treatment of diseases e.g. anaemia, neutropaenia, thrombocytopaenia, cancer, obesity, viral diseases and growth retardation. The present sequence is murine STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           98.6%; Score 1156; DB 5; Length 770;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 12, Application US/08369796

Patent No. 5716622

GENERAL INFORMATION:
APPLICANT: James E. Darnell, Jr.
APPLICANT: Zilong Wen
APPLICANT: Zilong Wen
APPLICANT: APPLICANT: ACTIVE REGIONS OF SIGNAL
TITLE OF INVENTION: FANSDUCER AND ACTIVATOR OF TRANSCRIPTION (STAT) PROTEINS
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSE: Klauber & Jackson
STREET: 411 Hackensack Avenue

Sequence 5, Application US/09364970

Patent No. 6235873

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Bromberg, Jacqueline

TITLE OF INVENTION: USES FOR IDENTIFYING MODULATORS OF ACTIVITY INCLUDING

TITLE OF INVENTION: DYSPROLIFERATIVE CELLULAR CHANGES

FILE REFERENCE: 600-1-252

CURRENT APPLICATION NUMBER: US/09/364,970

CURRENT APPLICATION NUMBER: US/09/364,970

WUMBER OF SEQ ID NOS: 10

A;Title: Complete genome sequence of an aerobic hyper-thermophilic Crenarchaeon, Aeropy
A;Reference number: A72450; MUID:99310339; PMID:10382966
A;Accession: G72593
A;Accession: G72593
A;Accute: preliminary
A;Residues: 1-533 <KAW>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A,Cross-references: UNIPROT:Q9YCP2; DDBJ:AP000061; NID:g5104821; PIDN:BAA80205.1; PID:d

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Transcription factor that binds to the interleukin-6 (IL-6)-responsive elements identified in the promoters of various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acute-phase protein genes.
--- PATHWAY: Involved in the gpl30-mediated signaling pathway.
--- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI.
--- SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Name=Del-701;
Isold=P40763-2; Sequence=VSP 010474;
-:- TISSUE SPECIFICITY: Heart, braIn, placenta, lung, liver, skeletal muscle, kidney and pancreas.
-:- PTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 homodimers and maximal transcriptional activity.
-:- SIMILARITY: Belongs to the transcription factor STAT family.
-:- SIMILARITY: Contains 1 SH2 domain.
                                                                                                                                                                                                                                                                                             PHOSPHORYLATION ON SERINE.

                                                                                                                                                                                                                                                                                                                                                                   (IL-6) responsive elements identified in the promoters of various acute-phase protein genes. STAT3B interacts with the N-terminal part of JUN to activate such promoters in a cooperative way.

-!- PATHWAY: Involved in the gp130-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).
-!- SUBCELULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation.

                                                                                                                                                                                                 The elements.";
J. Biol. Chem. 270:29998-30006(1995).

J. Biol. Chem. 270:29998-30006(1995).

L. PUNCTION: Transcription factor that binds to the interleukin-6 (Li-6)-responsive elements identified in the promoters of various acute-phase protein genes.

C. I. PATHWAY: Involved in the gpl30-mediated signaling pathway.

C. I. SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI (By similarity).

C. I. SUBCELDIAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).

C. I. PIM: Tyrosine phosphorylation (By similarity).

C. I. FIF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 thomodimers and maximal transcriptional activity (By similarity).

C. III, SIMILARITY: Belongs to the transcription factor STAT family.

                                                                                                                                                                                                                                                                                                                                                                           TISSUB-Mammary gland;

A Seyfert H.M., Wheeler T.T., Moolenaar A., Pitra C.;

Seyfert H.M., Wheeler T.T., Moolenaar A., Pitra C.;

The STATS-encoding gene was flipped across the STAT3/STAT5A-locus
T during ruminant evolution.";

Submitted (JAN-2004) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Transcription factor that binds to the interleukin-6

(IL-6) -responsive elements identified in the promoters of various acute-phase protein gene (By similarity).

-!- PATHWAY: Involved in the gpl30-mediated signaling pathway.

-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).

-!- SIMILARITY: Belongs to the transcription factor STAT family.
